

CryptoVision: Institutional Intelligence Platform Guide

A definitive handbook detailing platform elements, quantitative due diligence engines, multi-persona utility, and tangible value for both institutional professionals and everyday retail investors.

SYSTEM CLASSIFICATION Quantitative Due-Diligence Terminal	CORE ENGINE VERSION CryptoVision v2.5 Suite	ANALYTICAL STANDARD Deterministic On-Chain Grounding
SUPPORTED PERSONAS Explore, Research, Analyst	DATA PROVENANCE CoinGecko, DeFiLlama, GitHub, RPCs	DOCUMENT PURPOSE Comprehensive Feature & Utility Audit

 **Anti-Hype Reality Checks**

Cross-examines promotional whitepaper claims directly against empirical blockchain telemetry, active addresses, commit velocity, and TVL stability.

 **12-Step Due Diligence**

End-to-end structured investigation framework from consensus architecture to token vesting cliffs, producing exportable IC research memorandums.

 **Algorithmic Backtest Lab**

Simulates DCA, trend following, RSI mean reversion, and channel breakouts with Sharpe ratios, profit factors, win rates, and maximum drawdowns.

 **Structural Red Flag Radar**

Scans continuously for fatal tokenomic failure vectors: low float/high FDV dilution traps, whale concentration, and dormant developer repositories.

01 Executive Overview: What is CryptoVision?

CryptoVision is an institutional-grade crypto intelligence workstation and quantitative research terminal designed to solve the single largest crisis in digital asset investing: *information asymmetry, speculative hype, and predatory tokenomics*.

Over 90% of cryptocurrency projects launched in the market fail or result in severe capital impairment for investors. The primary cause is not market volatility, but deliberate obfuscation: low circulating supplies disguised as cheap tokens (the "High FDV" trap), misleading partnership claims unsupported by on-chain activity, dormant developer repositories, and opaque vesting cliffs where insider tokens are dumped on retail participants.

CryptoVision serves as the **truth layer for digital assets**. By integrating live telemetry across market feeds (CoinGecko), protocol liquidity and TVL (DeFiLlama), developer codebase velocity (GitHub REST APIs), and verified on-chain smart contracts, CryptoVision programmatically evaluates every asset through a deterministic mathematical lens. The integrated AI engine does not speculate or hallucinate metrics; it acts strictly as an analytical copilot that audits, cross-examines, and synthesizes verifiable evidence.

The CryptoVision Grounding Mandate

"All Project Reality Scores, Red Flags, and Opportunity rankings are computed mathematically from raw telemetry data. The AI language layer only summarizes verified structured facts—it never hallucinates metrics or promises speculative price targets."

02 Website Elements & Module Inventory (Part 1)

CryptoVision is architected into 14 distinct specialized workstations, modules, and diagnostic utilities:

Market Overview & Regime Engine /overview

Macro command center providing systemic health diagnostics:

- **Market Regime Engine:** Classifies state as *BULLISH*, *BEARISH*, *NEUTRAL*, or *HIGH VOLATILITY* with confidence percentage.
- **Macro Telemetry Bar:** Total Crypto Market Cap, 24h Volume, BTC & ETH Dominance.
- **Trending Asset Discovery:** High-velocity assets with 7-day sparkline micro-charts.
- **Persona Switcher:** Instant toggle across Explore, Research, and Analyst views.

Projects & Visual Market Heatmap /projects & /market

Visual intelligence station representing market structure:

- **Market Heatmap:** Visual tile tree-map where box size reflects market cap and color reflects 24h gain/loss.
- **Tabular Deep Explorer:** Sortable by Market Cap Rank, FDV, Price Change (1h, 24h, 7d), Volume, and Sparklines.
- **Instant Filtering & Search:** Sub-second query filtering by ticker symbol or project name.

Opportunity & Discover Radar /discover

Pre-hype scanner identifying emerging assets before mainstream retail discovery:

- **Early Signals:** Spikes in GitHub commits, volume accumulation, and relative strength.
- **Opportunity Scoring:** Proprietary Opportunity Scores (0–100) vs. structural risk.
- **Risk Tier Filtration:** Filter projects by Moderate, High, or Very High risk thresholds.

News & Catalyst Intelligence /news

Verifiable news intelligence stream cross-examining headlines against blockchain facts:

- **Verification Badges:** Labels news events as ON-CHAIN SUPPORTED, MIXED EVIDENCE, CONTRADICTED, or UNVERIFIED.
- **Thematic Categories:** Regulatory, Dev Releases, Token Unlocks, Exploits, Flows.
- **Impacted Asset Mapping:** Displays affected token tickers and underlying telemetry.

02 Website Elements & Module Inventory (Part 2)

Narratives & Sector Trends

/narratives

Tracks macro capital rotation into emerging crypto sub-sectors:

- **Thematic Clusters:** AI Compute, Real World Assets (RWA), Layer 2s, DePIN, Restaking.
- **Narrative Momentum Meters:** Quantifies 7d and 30d capital inflows and market cap expansion.
- **Constituent Baskets:** Lists leading and lagging protocols driving each macro narrative.

Asset Intelligence Station

/asset/:coinId

The flagship deep-dive workstation for individual digital assets:

- **Recharts Interactive Chart:** Dynamic price series spanning 1D, 7D, 30D, 90D, and 1Y.
- **Technical Indicators Suite:** 14-period RSI, 20 & 50 SMA crosses, MACD, Bollinger Bands.
- **Claims vs. Reality Matrix:** Audits marketing claims against on-chain evidence with verdicts.
- **7D Project DNA:** Tech, Adoption, Dev Velocity, Ecosystem, Tokenomics, Liquidity, Governance.
- **Contrarian Thesis:** Dedicated Bull Case, Bear Case, and Critical Unknowns.
- **Assumption Sensitivity Lab:** Interactive sliders simulating supply unlock or TVL shocks.

Risk Radar & Failure Scanner

/risk

Defensive surveillance center flagging structural vulnerabilities:

- **High FDV Traps:** Flags assets where FDV exceeds market cap by >4x, warning of dilution.
- **Whale Concentration:** Detects supply clustering where top wallets control liquidity.
- **Developer Dormancy:** Identifies codebases with declining commits over 4–12 weeks.
- **Liquidity Slippage:** Highlights low 24h volume-to-market cap ratios prone to exit traps.

AI Research Analyst (Lab)

/research-lab

Generative institutional memorandum copilot with verifiable data grounding:

- **Prompt Presets:** Bitcoin Supply Absorption, Solana Decentralization, L2 Blob Gas Dynamics.
- **Interactive Query Terminal:** Conversational copilot synthesizing technicals and reality checks.
- **Evidence-Backed Output:** Every paragraph cites underlying metrics and confidence scores.

Strategy Backtest Lab

/research-lab

Quantitative backtesting suite to validate trading rules before risking capital:

- **4 Strategies:** Dollar-Cost Averaging (DCA), SMA Trend Following, RSI Mean Reversion, Channel Breakouts.
- **Performance Metrics:** Total Return vs. Benchmark, Sharpe Ratio, Max Drawdown %, Win Rate %, Profit Factor.
- **Dual Equity Curve Chart:** Visualizes portfolio growth against a buy-and-hold benchmark.
- **Trade Ledger:** Chronological record of entry/exit prices, reasons, and individual PnL.

12-Step Due Diligence Wizard

/due-diligence

Comprehensive step-by-step institutional investment committee workflow:

- **12 Steps:** Overview → Tech Stack → On-Chain Adoption → Dev Health → TVL → Tokenomics → Market Depth → News Audit → Red Flag Scan → Claims vs Reality → Bull/Bear → Memo Export.
- **One-Click Memo Export:** Copies a formatted markdown research memorandum to clipboard.

Multi-Asset Comparison Lab

/compare

Side-by-side benchmarking of up to 4 assets with normalized performance (rebased to 100) and cross-asset metric comparisons.

Financial Modeling & Academy

/learn

Interactive calculators (AMM Impermanent Loss, Ruin Risk Sizing, Compounding APY) paired with plain-English real-world analogies.

Portfolio & Custom Watchlist

/watchlist

Live pricing, portfolio cost-basis accounting, profit/loss calculations, custom alerts, and persistent tracking.

Trust Center & Methodology

/trust

Full transparency into scoring algorithms, multi-source provenance, anti-hallucination grounding, and analytical limits.

03 How CryptoVision is Useful: Stakeholder Breakdown

CryptoVision bridges the gap between raw data and high-conviction decision making. It is engineered with a polymorphic architecture that tailors analytical depth according to user expertise:

For Institutional Professionals

HEDGE FUNDS, VCS, RESEARCH ANALYSTS, QUANTS & COMPLIANCE

- ✓ **Consolidated Diligence Cockpit:** Replaces 5+ disconnected tools (Etherscan, DeFiLlama, GitHub, CoinGecko, TradingView) into a single verified workstation.
- ✓ **Unbiased Contrarian Theses:** Automatically generates the Bear Case and Key Unknowns, preventing internal analyst confirmation bias.
- ✓ **Dilution & Vesting Surveillance:** Evaluates FDV-to-market cap ratios, unlock schedules, and supply inflation before allocating large liquidity.
- ✓ **Algorithmic Strategy Validation:** Tests execution strategies against historical candle data with full Sharpe, drawdown, and win rate reporting.
- ✓ **Rapid IC Memo Generation:** The 12-step Due Diligence wizard exports complete, formatted research memorandums in seconds.
- ✓ **Verifiable News Auditing:** Prevents institutional funds from getting trapped by fake partnership announcements or PR fluff.

For Everyday Users & Retail Investors

BEGINNERS, CASUAL TRADERS, DEFI PARTICIPANTS & LONG-TERM HODLERS

- ✓ **Rug-Pull & Scam Protection:** The Risk Radar instantly alerts users to insider concentration and extreme dilution before they buy.
- ✓ **Jargon-Free Financial Literacy:** Plain-English explainers translate complex concepts (e.g. FDV, Impermanent Loss) into clear everyday analogies.
- ✓ **Mathematical Risk Discipline:** The Position Sizing calculator prevents traders from risking more than 1–2% of their net worth on single trades.
- ✓ **Institutional-Grade Parity:** Gives retail investors the exact same quantitative tools and telemetry previously restricted to Wall Street hedge funds.
- ✓ **FOMO Immunity:** Visual indicators show when assets are extremely overbought (RSI > 70) or when claims are contradicted by data.
- ✓ **Multi-Language & Currency Support:** View prices in local currencies (USD, INR, EUR, GBP, AED, JPY, SGD) and 8 regional languages.

Multi-Persona Research Experience Engine

PERSONA	TARGET AUDIENCE	INTERFACE PRESENTATION	PRIMARY VALUE DELIVERED
EXPLORE	Beginners & Casual Investors	Visual analogies, plain-English summaries, high-level risk badges, simplified charts	Safety, jargon removal, anti-scam protection, fundamental understanding
RESEARCH	Allocators & Due Diligence Analysts	Claims vs. Reality matrix, 7D Project DNA, Bull/Bear theses, 12-step diligence wizard	Structured auditing, tokenomic cliff analysis, investment committee memos
ANALYST	Quants, Fund Strategists & Traders	Raw telemetry, backtesting engine, Sharpe ratios, sensitivity sliders, feature weights	Statistical rigor, quantitative backtesting, stress testing, edge discovery

What It Helps With & Why You Must Check It

Capital Preservation

Crypto is an asymmetric market where losing 50% requires a 100% gain just to break even. CryptoVision acts as a shield against catastrophic drawdowns by scanning for liquidity black holes and token unlocks.

Cutting Through PR Smoke

Projects frequently claim millions of users or revolutionary throughput. CryptoVision verifies these claims against on-chain transactions, fee revenue, and real GitHub commits.

Asymmetric Alpha Discovery

Identifies projects with rising developer velocity, expanding TVL, and improving liquidity *before* they begin trending on social media or get listed on tier-1 exchanges.

The Severe Cost of Not Checking CryptoVision

Investors who buy tokens without auditing Fully Diluted Valuation (FDV) and vesting cliffs frequently suffer 70%–90% losses even during bull markets because insider unlock selling overwhelms organic buyer liquidity. Checking CryptoVision’s **Risk Radar** and **Tokenomics Audit** immediately exposes these structural traps before committing capital.

Tangible Value: What Do Users Get?

When a user or professional utilizes CryptoVision, they walk away with concrete, actionable deliverables:

TANGIBLE DELIVERABLE	DESCRIPTION & MECHANISM	ACTIONABLE INVESTOR BENEFIT
Project Reality Score (0–100)	Composite index synthesizing Technology, Adoption, Developer Health, Ecosystem, Tokenomics, Liquidity, and Governance.	Instant objective benchmark to compare any token against peers without personal bias.
Red Flag Audit Report	Surfaces structural flaws: Low circulating supply ratios, whale concentration, dormant codebases, and RSI exhaustion.	Avoids catastrophic rug pulls, insider dumping, and illiquid exit traps.
Claims vs. Reality Matrix	Verification of official marketing claims against hard on-chain telemetry (Supported, Mixed, or Contradicted).	Identifies dishonest management teams and hollow projects with zero real usage.
Contrarian Investment Thesis	Balanced synthesis comprising verified Bull Case triggers, Bear Case risks, and Critical Unknowns.	Prevents echo-chamber thinking; establishes clear stop-loss criteria and profit targets.
Strategy Backtest Report	Full quantitative audit of DCA, SMA, RSI, or Breakout strategies with equity curves, Sharpe ratio, drawdown, and win rate.	Validates if an entry/exit system is mathematically profitable before risking real funds.
Exportable Research Memo	Standardized Markdown due diligence memorandum generated with one click from the 12-step wizard.	Ready for presentation to Investment Committees, fund LPs, or personal records.
Interactive Simulators	Calculators for AMM Impermanent Loss, Position Sizing (Risk of Ruin), and Staking Compounding Yield.	Precise position sizing and accurate expected APY return modeling after fees.

06 Practical Workflow: How to Use CryptoVision

To extract maximum value from CryptoVision, follow this recommended 4-stage operational workflow:

Phase 1: Macro & Sector Triage

1. Open `/overview` to assess the current **Market Regime** (Bullish, Bearish, Volatile).
2. Visit `/narratives` to identify which crypto sub-sectors (AI, RWA, L2s) have positive momentum.
3. Check `/news` to verify if current market catalysts are on-chain supported or false hype.

Phase 2: Asset Discovery & Screening

1. Access `/discover` to scan for emerging tokens with surging GitHub commits and volume.
2. Filter out projects with *Very High* risk ratings.
3. Use `/projects` heatmap to gauge relative sector market cap weighting.

Phase 3: Deep Due Diligence

1. Navigate to `/asset/:id` to inspect technicals, 7D Project DNA, and reality checks.
2. Run `/due-diligence` through all 12 steps to systematically verify fundamentals and tokenomics.
3. Audit the **Risk Radar** (`/risk`) to confirm no critical unlock cliffs or whale traps exist.

Phase 4: Execution & Monitoring

1. Use `/learn` position-sizing calculator to establish exact trade size based on 1% risk.
2. Backtest your trading strategy in `/research-lab` to check historical drawdown and Sharpe.
3. Add the asset to your `/watchlist` to track live PnL and alert triggers.

Summary Verdict: The Professional Standard for Crypto

CryptoVision fundamentally transforms how market participants interact with digital assets. By replacing speculative social media narratives with verifiable blockchain reality, deterministic scoring, and institutional-grade risk auditing, the platform empowers investors of all levels to protect capital, eliminate emotional bias, and uncover true asymmetric opportunities.
